# Black Box Testing Techniques For Functional Testing Of Software And Systems Computer Science

**black-box vs. white-box testing: choosing the right ...** - the main difference between black-box and white-box testing is the areas on which they choose to focus. in simplest terms, black-box testing is focused on results. if an action is taken and it produces the desired result then the process that was actually used to achieve that outcome is irrelevant. **black box testing - brigham young university** - black box testing • testing software against a specification of its external behavior without knowledge of internal implementation details - can be applied to software "units" (e.g., classes) or to entire programs - external behavior is defined in api docs, functional specs, requirements specs, etc. **white box testing - a literature review** - traditionally software testing techniques can be broadly classified into black-box testing and white-box testing [5] [12]. black box testing is also called as functional testing, a functional testing technique that designs test cases based on the information from the specification [5]. with black box **white-box testing - studentsu** - white-box testing white-box testing is a verification technique software engineers can use to examine if their code works as expected. in this chapter, we will explain the following: • a method for writing a set of white-box test cases that exercise the paths in the code **verification and test methods for access control policies ...** - for the use of black box and white box model checkers that verify the integrity, coverage, and confinement of the specified safety requirements against models. in addition, an efficient way of generating test cases for the implementation from a model as well as a method for detecting ac rule faults in real time are discussed. **a comparative study of white box, black box - thesai** - figure 3. represent black box testing black box testing - without any knowledge of internal working and it only examines the fundamental aspects of the system. while performing black box test, a tester must know the system architecture and will not have access to the source code.
